 b. Recommended: Fuji PictroProof, KODAK APPROVAL or equivalent
 c. Proof should contain SWOP standard color bars. (Include a 6 mm 5%, 25%, 50%, 75%, 100% C, M, Y, K patch strip)
 d. Acceptable (for identification only, not for color): Inkjet or similar laser quality proofing system.
 e. Maximum dimension for single page proof: 11" × 17"

9. FILE SET-UP

- a. Single page image area should be furnished to magazine trim size (7¼" x 10¼"), and include ¼" bleed all sides, and be centered within the file.
 b. Spreads (two facing pages), should be furnished as one file, with image area centered within the file, to magazine trim, and include ¼" bleed top, bottom, and outside only.
 c. For bleed pages, keep essential matter ¾" from top, bottom and sides of bleed edge. Bleed spreads should have essential matter at least ¼" from outer bleed edge of each page. Live material on facing pages should not be closer than ¼" to center of fold on either side of gutter — a total of ½" for both pages. The publisher reserves the right to crop ¼" from either side of a full page or half page to compensate for variations in trim.
